

Connecting Experience House Checklist

AGE GROUP

11+

AMOUNT OF PEOPLE

3+

TIME

1 HOUR

OBJECTIVE

to check their energy consumption and try to reduce it.

MATERIAL

Internet/access to a library

Instructions

Have participants work together to create a check list of actions they could take to reduce the energy they waste.

For example: not turning on the light until it's dark, putting on another layer of clothing instead of turning up the heating, checking and sealing any drafts.

Once participants have created their checklist, they can use it to check their home and make changes based on it. They can talk with their parents to see if their actions have any impact on the amount of energy being used in their home.
